RICHMOND VIRGINIA

VIRGINIA PMA STATE COMMITTEE

NOVEMBER 1950

FOREWORD

Included in the pages of this booklet are summaries of the programs administered by the Production and Marketing Administration in Virginia. Most of these summaries were gathered from information furnished by County Committees and through their efforts the compilation of this data is possible.

It is our policy to present these Annual Reports in a fashion which will allow comparison from year to year; hence this report is again prepared similar to that of 1947 and 1948. However, because of increased PMA activities in Price Support and Marketing Quota Programs, there is considerably more information than has been included before. We cannot, of course, in this or any other publication enumerate the work and difficulties encountered in attaining the "figures" herein. Suffice it to say that we are immensely gratified at the cooperativeness and energy displayed by all concerned -- committeemen, county office personnel, representatives of other agencies, farmers and others.

To those then who together make it possible we make this report. It is hoped that these reports will assist you in carrying out future programs in the same commendable manner as heretofore.

SECTION IV - TOBACCO CROP INSURANCE PROGRAM IN VIRGINIA	59
---	----

SECTION I - THE AGRICULTURAL CONSERVATION PROGRAM - 1949

In 1949 funds for payment of conservation practices carried out were restored to approximately the same level as in years prior to 1948. Consequently, the total (credit value) of conservation practices performed when compared to the total for which payment could be made greatly increased over the previous year. It should be pointed out, however, that "credit" values of practices do not accurately reflect actual costs of practices carried out; for, through the programs, approximately half the actual cost of the practice is borne by the farmer himself. Needless to say such a situation would probably not exist if he were not convinced that such a course was profitable from a long-term point of view. It would be interesting to speculate as to the total worth to Virginia and the Nation of these practices for enriching and conserving the soil for our future generations. Such is not, however, within the scope of this "publication", since our aim is to present herein only the figures as they were accumulated.

During 1949, with the cooperation of all other agricultural agencies, pasture establishment and improvement was stressed very greatly. The results are highly gratifying to the people who so earnestly urged that additional pastures be seeded in Virginia, when the figure of 45,473 acres established in 1949 is compared to the 7,366 for 1947 and 11,707 in 1948. In addition to the payment for establishment of pastures, a considerable tonnage of limestone, superphosphate, and potash (from mixed fertilizers) was applied to pasture acreage. Altogether, nearly 52% of the total state allocation of funds went for establishing new pastures and to applying materials to old or new pastures.

SECTION II - MARKETING QUOTA PROGRAMS

A. Tobacco Marketing Quotas

Marketing Quota Programs are designed to assist in adjusting the supply of tobacco in line with demand, thereby preventing the accumulation of price-depressing surpluses with corresponding lower prices to the producer.

The authority for the Tobacco Marketing Quota Program is contained in the Agricultural Adjustment Act of 1938, as amended, which empowers the Secretary of Agriculture to proclaim national marketing quotas for the various kinds of tobacco whenever it is determined that the total supply is in excess of the reserve supply level as defined in the Act. The quota proclamation by the Secretary, however, is contingent on a referendum in which producers are given the opportunity to cast their votes either for or against quotas. If two-thirds or more of the votes cast favor quotas, the Marketing Quota Program becomes operative.

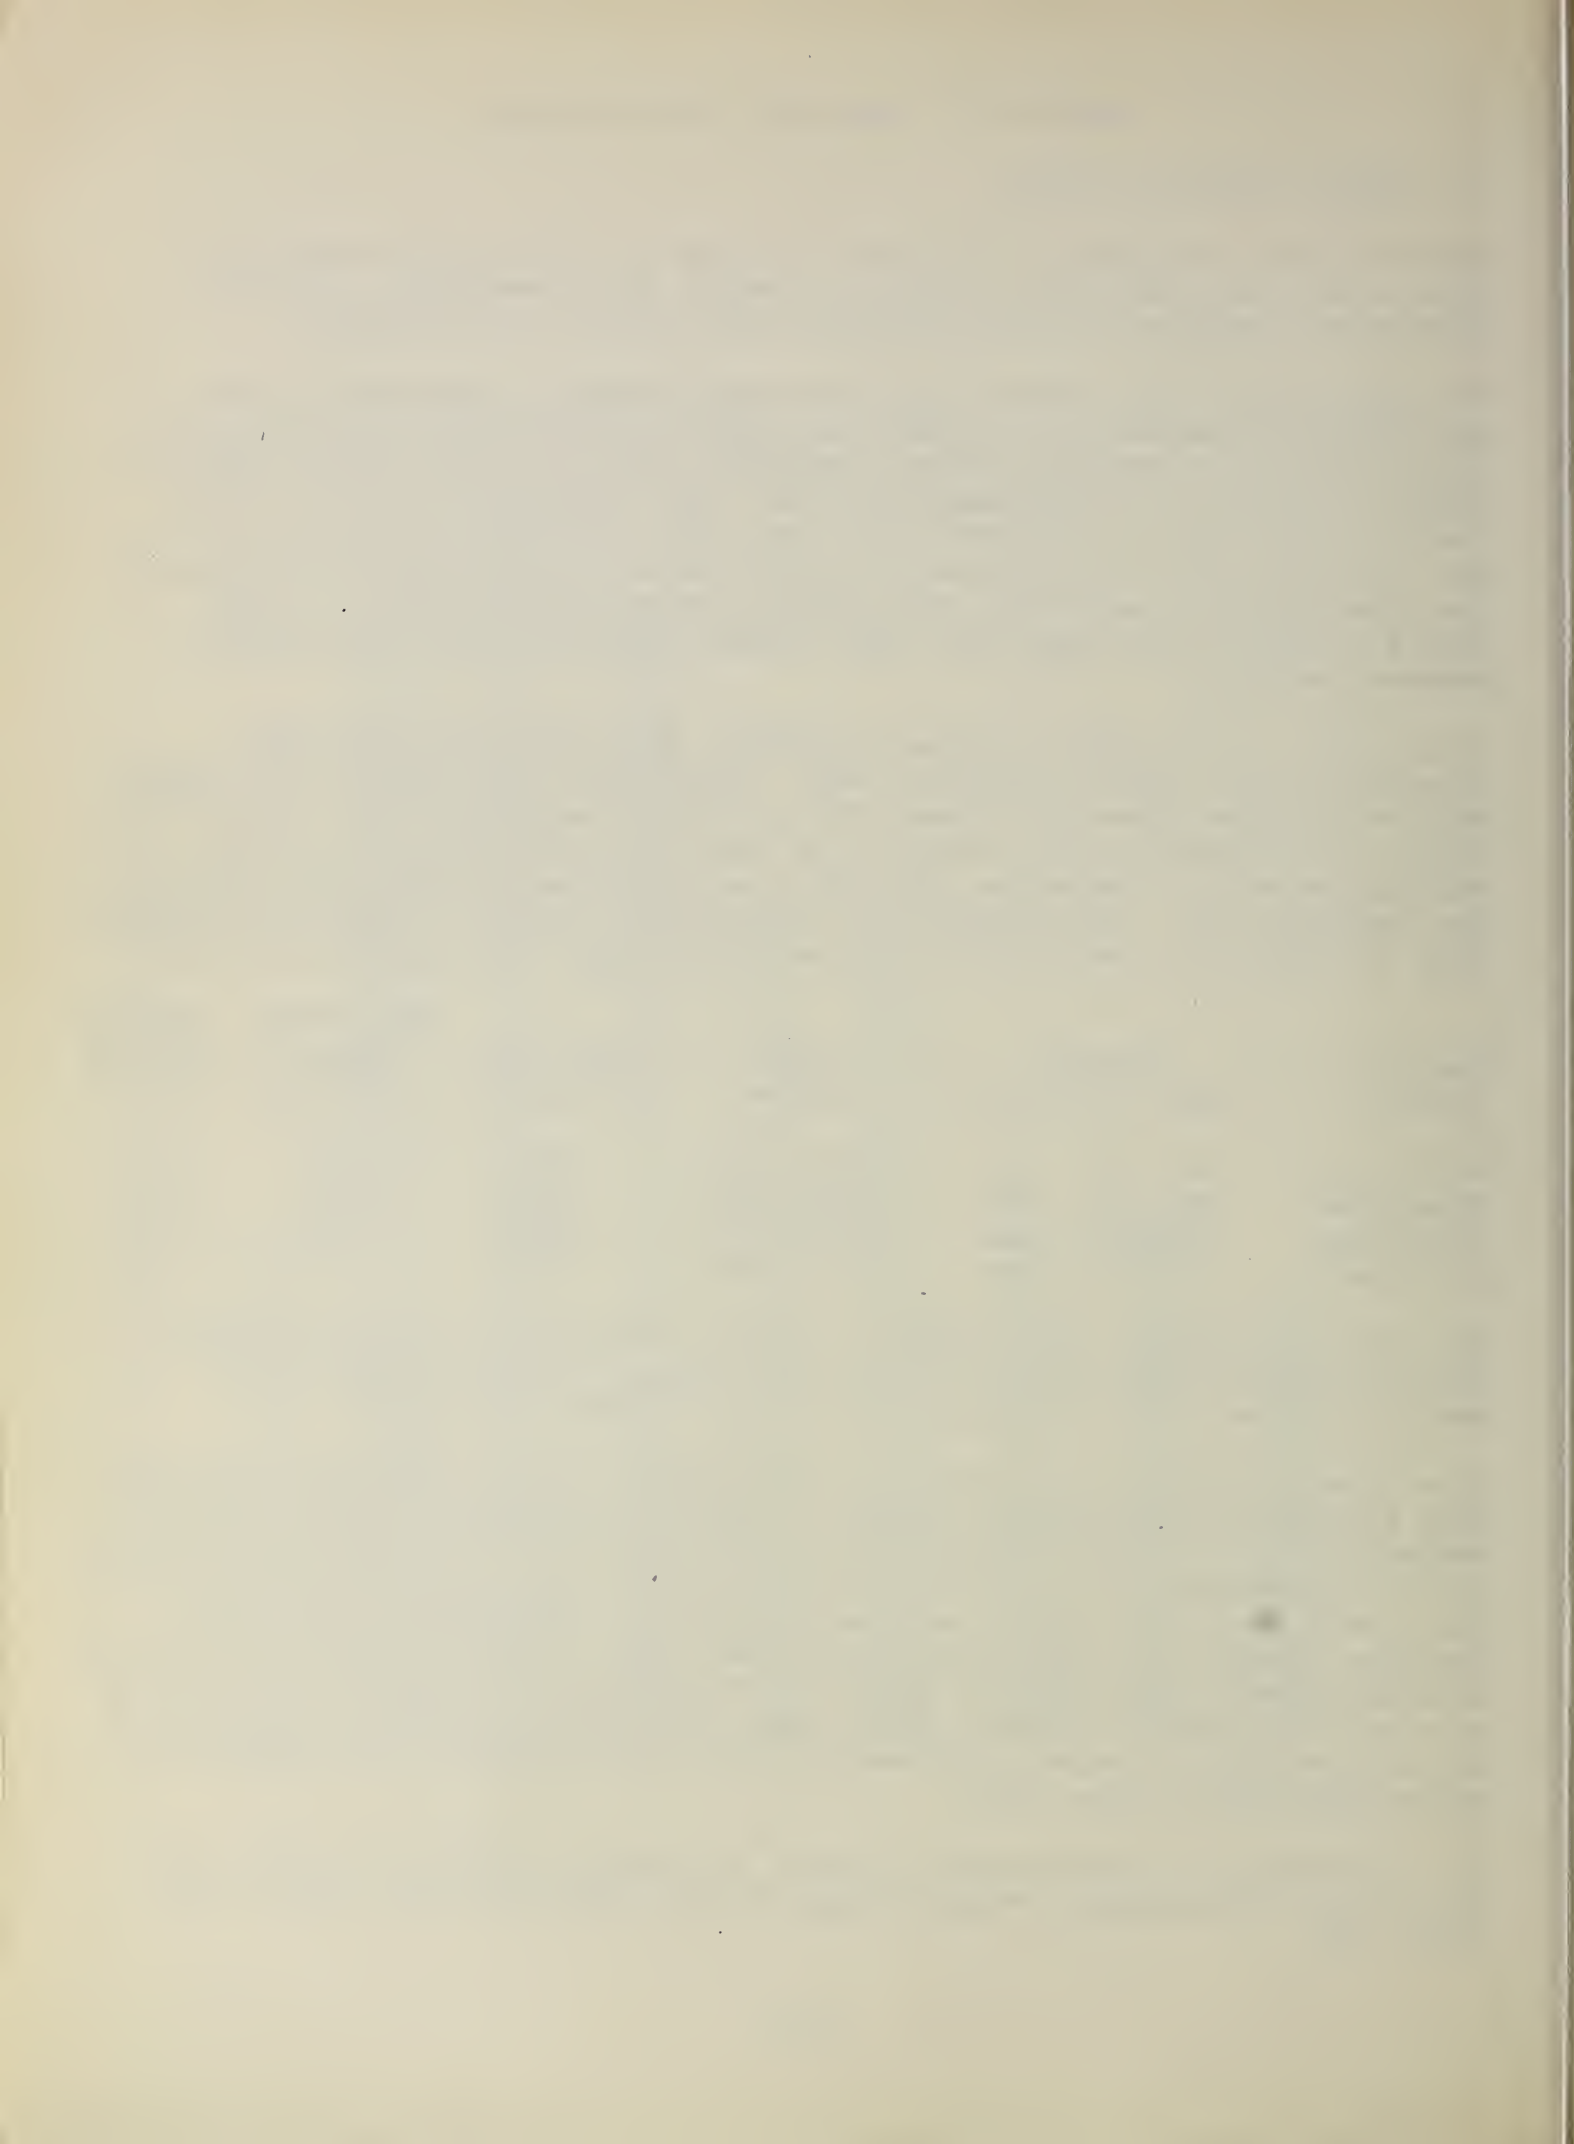

In Virginia, quotas were in effect on Burley, Fire-cured and Flue-cured Tobaccos for the 1949-50 marketing year. Quotas were proclaimed by the Secretary on Virginia Sun-cured Tobacco for the 1950-51 marketing year, and growers voting in a referendum held December 15, 1949 approved quotas by an overwhelming majority. Therefore, Virginia Sun-cured Tobacco Quotas are effective for the 1950 crop. The following are the official results of the last referenda held in Virginia on the various tobaccos. Also shown are the years affected.

Kind of Tobacco	Date of Last Referendum	Crops Covered	Total Vote For Quotas	Total Vote	Percent
				Opposed to Quotas	Favoring Quotas
Burley	Nov. 26, 1949	1950-51-52	7295	328	95.7
Fire-cured	Nov. 27, 1948	1949-50-51	4598	197	95.9
Flue-cured	July 23, 1949	1950-51-52	20372	338	98.4
Sun-cured	Dec. 15, 1949	1950-51-52	1850	171	91.5

The Tobacco Marketing Quota Program is closely related to the tobacco price support program since eligibility for price support loans is dependent on whether producers are in compliance with their acreage allotments.

Farm tobacco prices are supported by non-recourse loans at 90 percent of parity made to farmers producing the tobacco. Loans are made during regular marketing seasons through Growers' Cooperative Associations under contract with Commodity Credit Corporation. If bids on the warehouse floor are not above the loan level for a particular grade, the grower may negotiate a non-recourse loan, thus assuring himself of a price equal to the loan rate. Tobacco received under loan is dried, packed and stored by commercial facilities on a contract basis and is sold by the Cooperative Association. When all tobacco taken by the Association is sold, receipts in excess of loans and cost are prorated to the growers who placed the tobacco under loan.

The following is a summarization by kinds of tobacco, showing (1) total sales, (2) value, (3) average price per pound, (4) loan rate, and (5) percent taken under loan.

Tobacco Marketing Quotas - Cont'd.

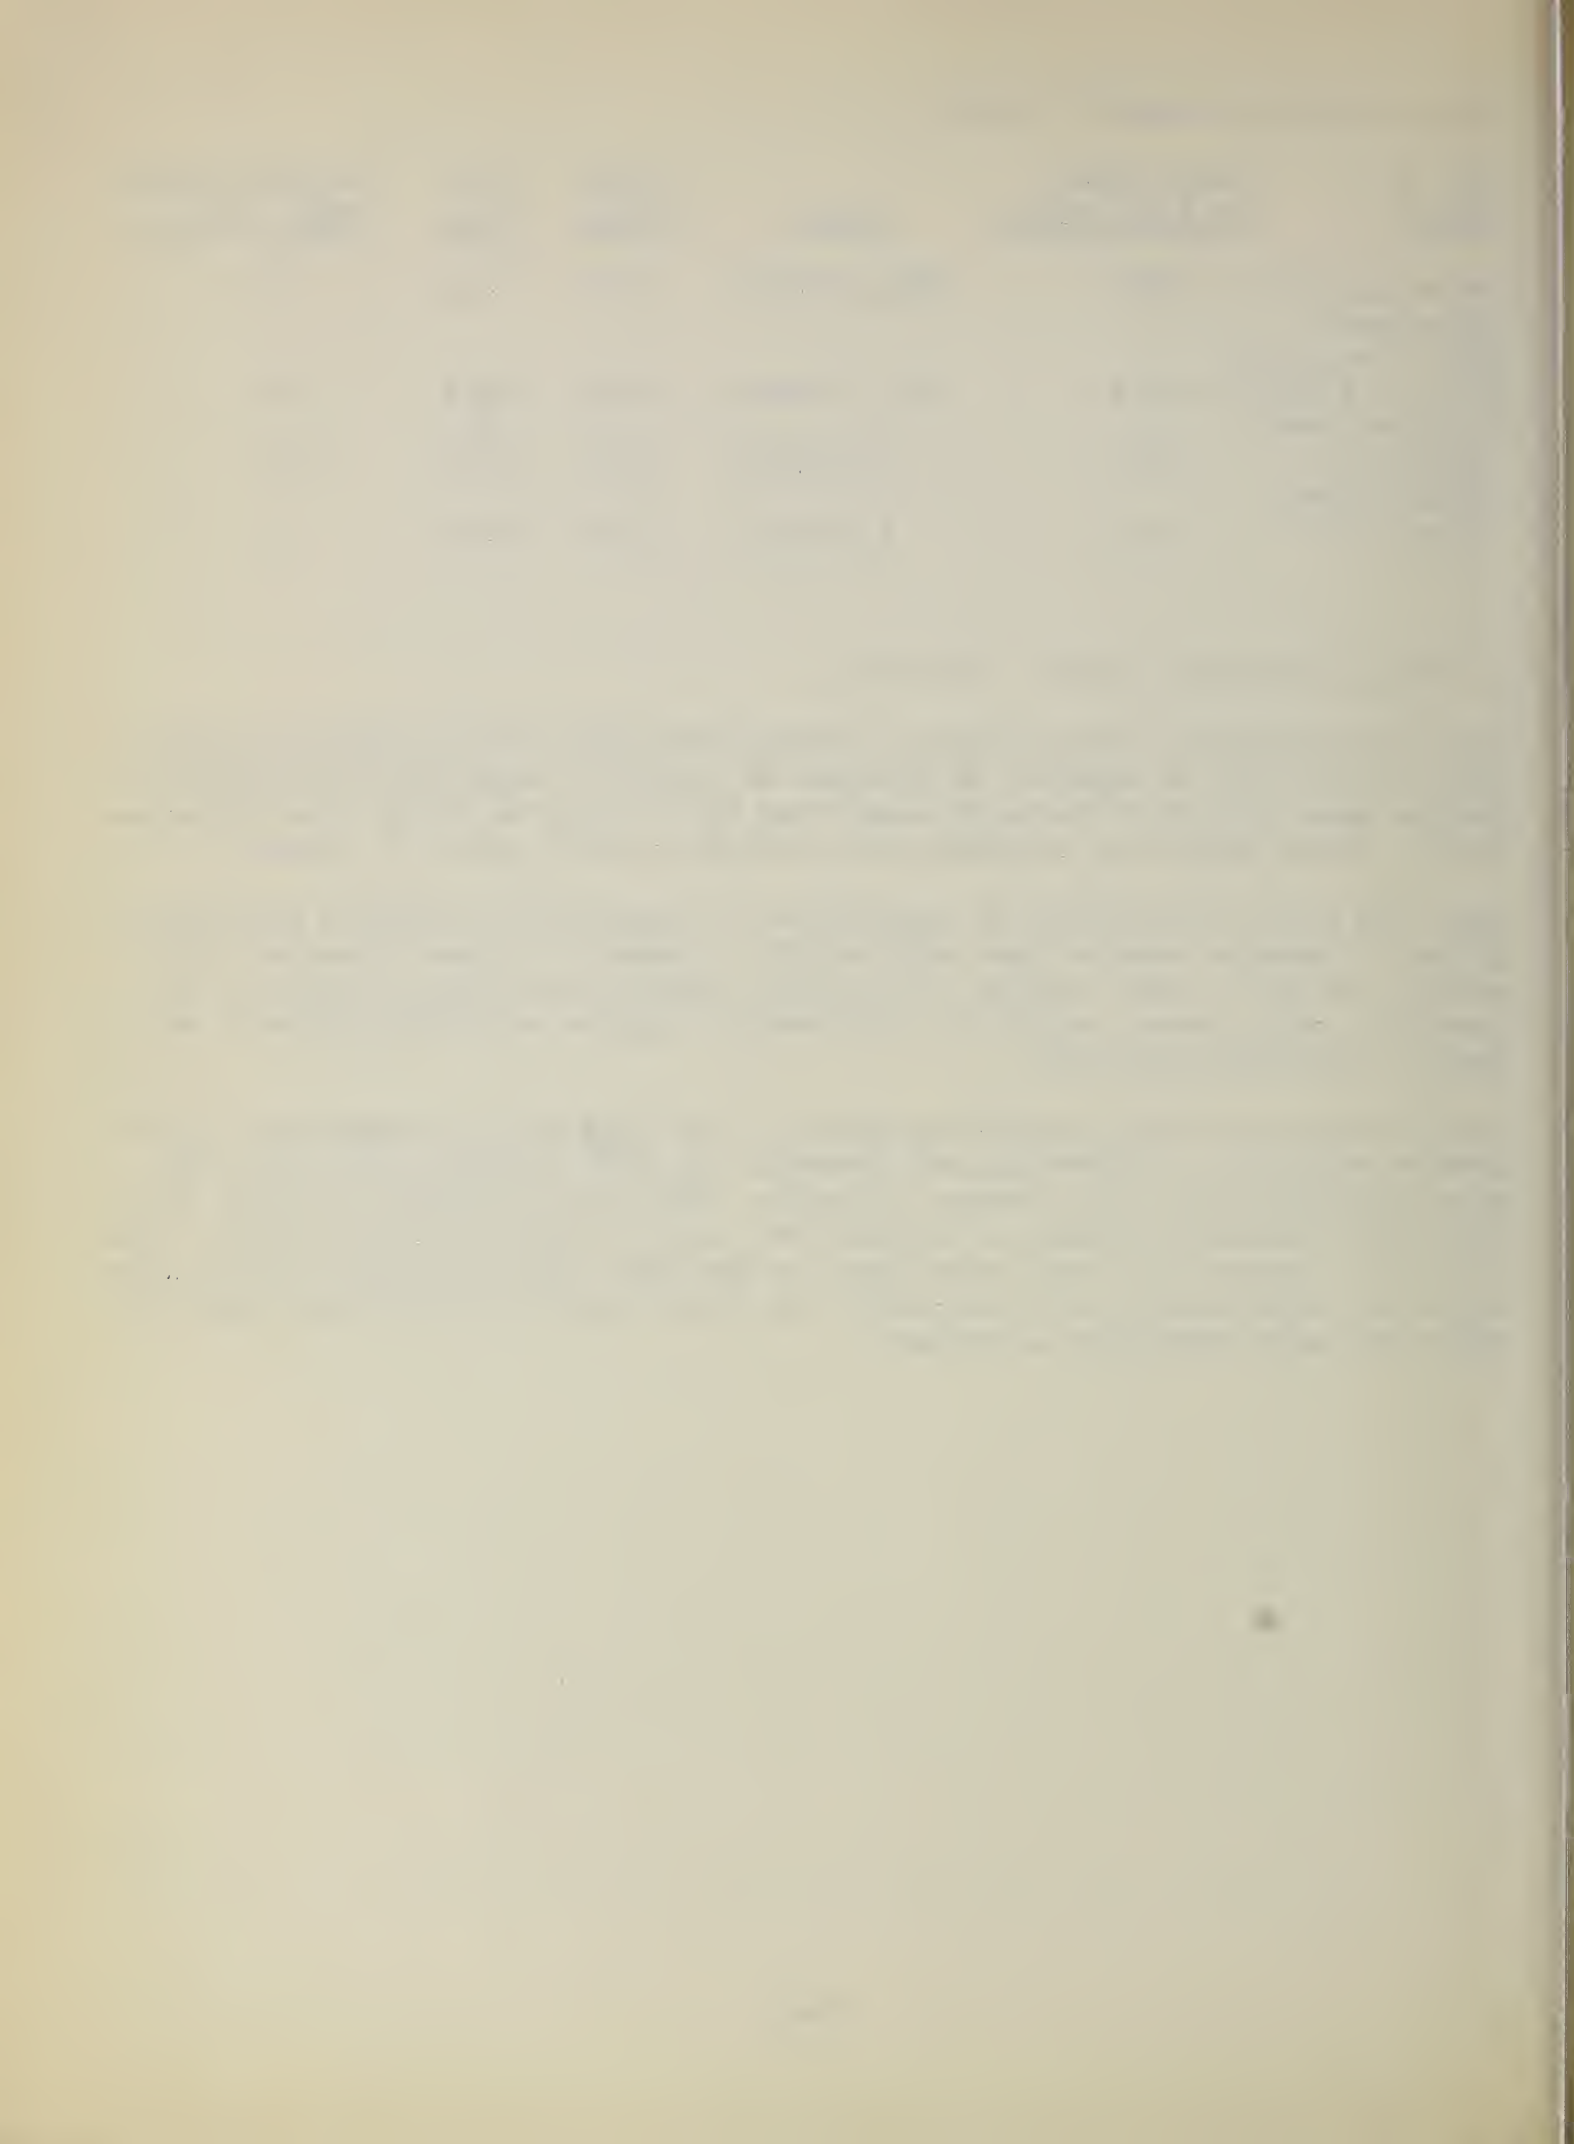

<u>Type of Tobacco</u>	<u>Total Sales (Million Lbs.)</u>	<u>Value</u>	<u>Average Price</u>	<u>Loan Rate</u>	<u>Percent Placed Under Loan</u>
Burley (Type 31) Flue-cured (Type 11-A, Old Belt Va. & N.C.)	555.3	\$251,550,900	45.3	40.3	7.0
Va. Fire-cured (Type 21)	219.8	101,208,424	46.0	42.5	12.7
Va. Sun-cured (Type 37)	12.1	4,056,892	33.5	30.2	12.3
	3.8	1,200,157	31.4	26.9	0.5

B. Peanut Marketing Quotas - 1949 Crop

The Peanut Marketing Quota Program as authorized under the Agricultural Adjustment Act of 1938, as amended, is designed to assist in adjusting the supply of peanuts more nearly in line with demand and by so doing to prevent the accumulation of price depressing surpluses with resulting lower prices to growers.

Under the Act, the Secretary of Agriculture is empowered to proclaim marketing quotas on peanuts whenever the total supply of peanuts becomes excessive and reaches the quota level defined in the Act. However, the quota program is not operative until growers voting in a referendum approve marketing quotas by at least a two-thirds majority.

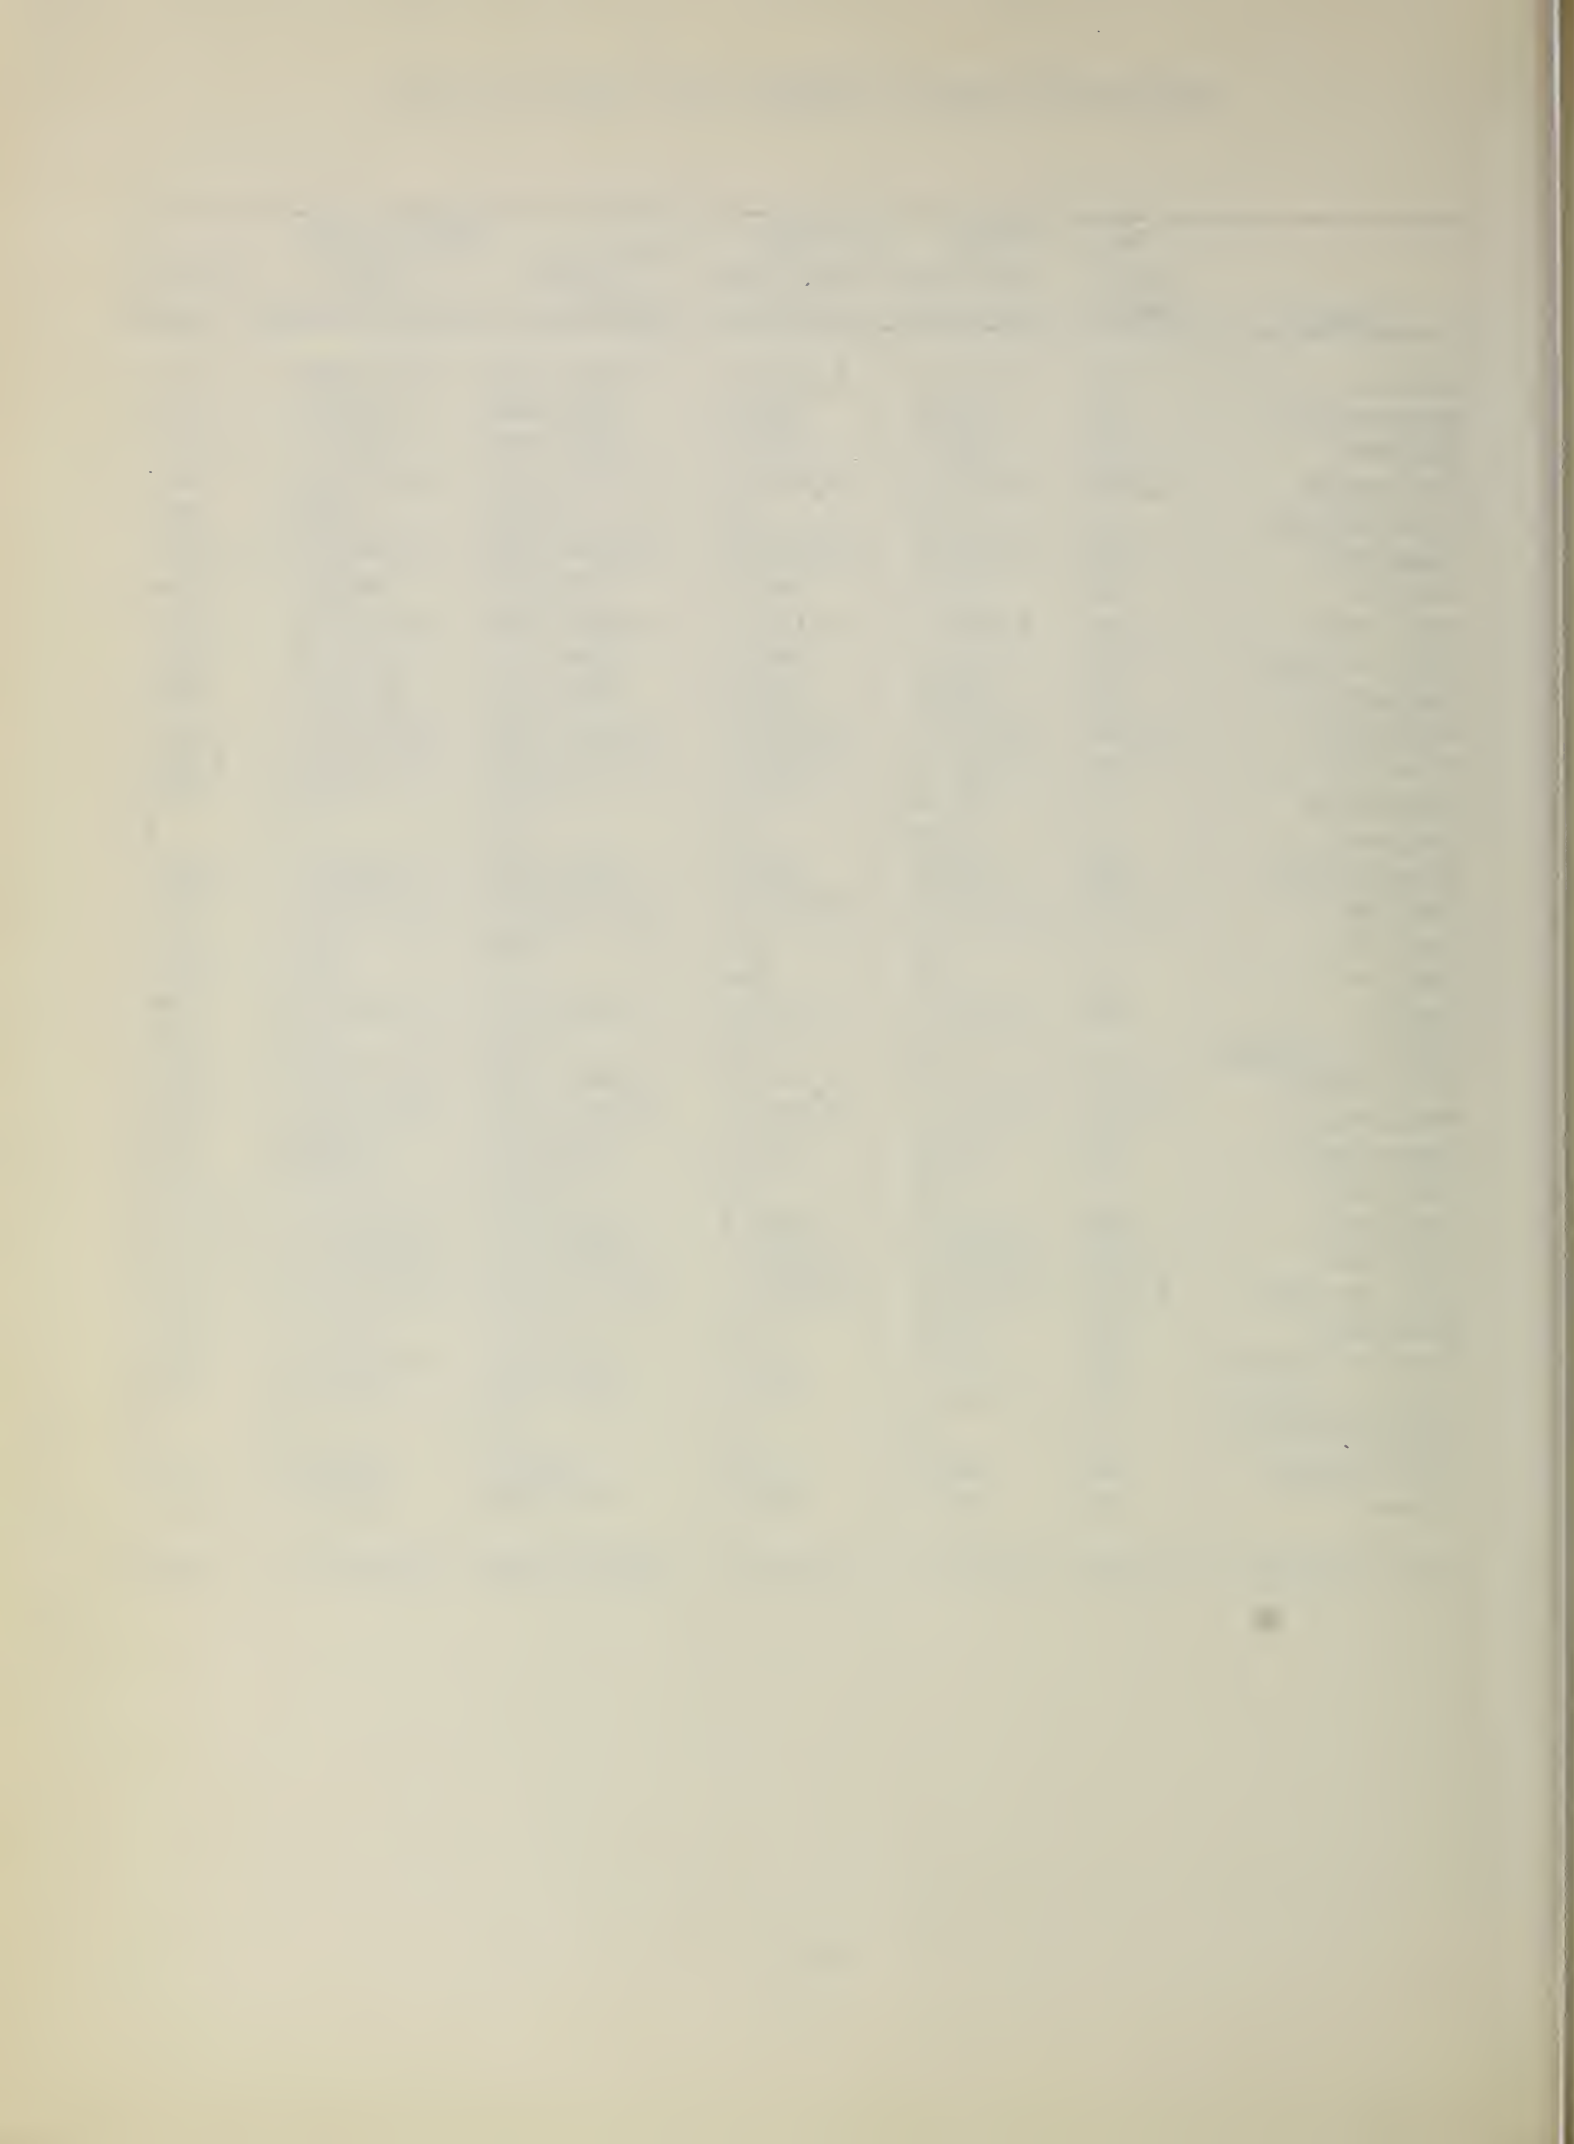

The Secretary proclaimed marketing quotas on the 1948 crop of peanuts and 7,810 growers voting in a referendum held December 15, 1947 approved quotas for the years 1948-49-50 by a 96.2 percent majority. However, on January 2, 1948, the Secretary terminated quotas on the 1948 crop due to world shortage of food, fats and oils. Quotas were again proclaimed on the 1949 crop of peanuts due to changing world requirements and consequently the 1949 crop was produced and marketed under the quota provision of the Act.

SECTION III - PRICE SUPPORT PROGRAMS

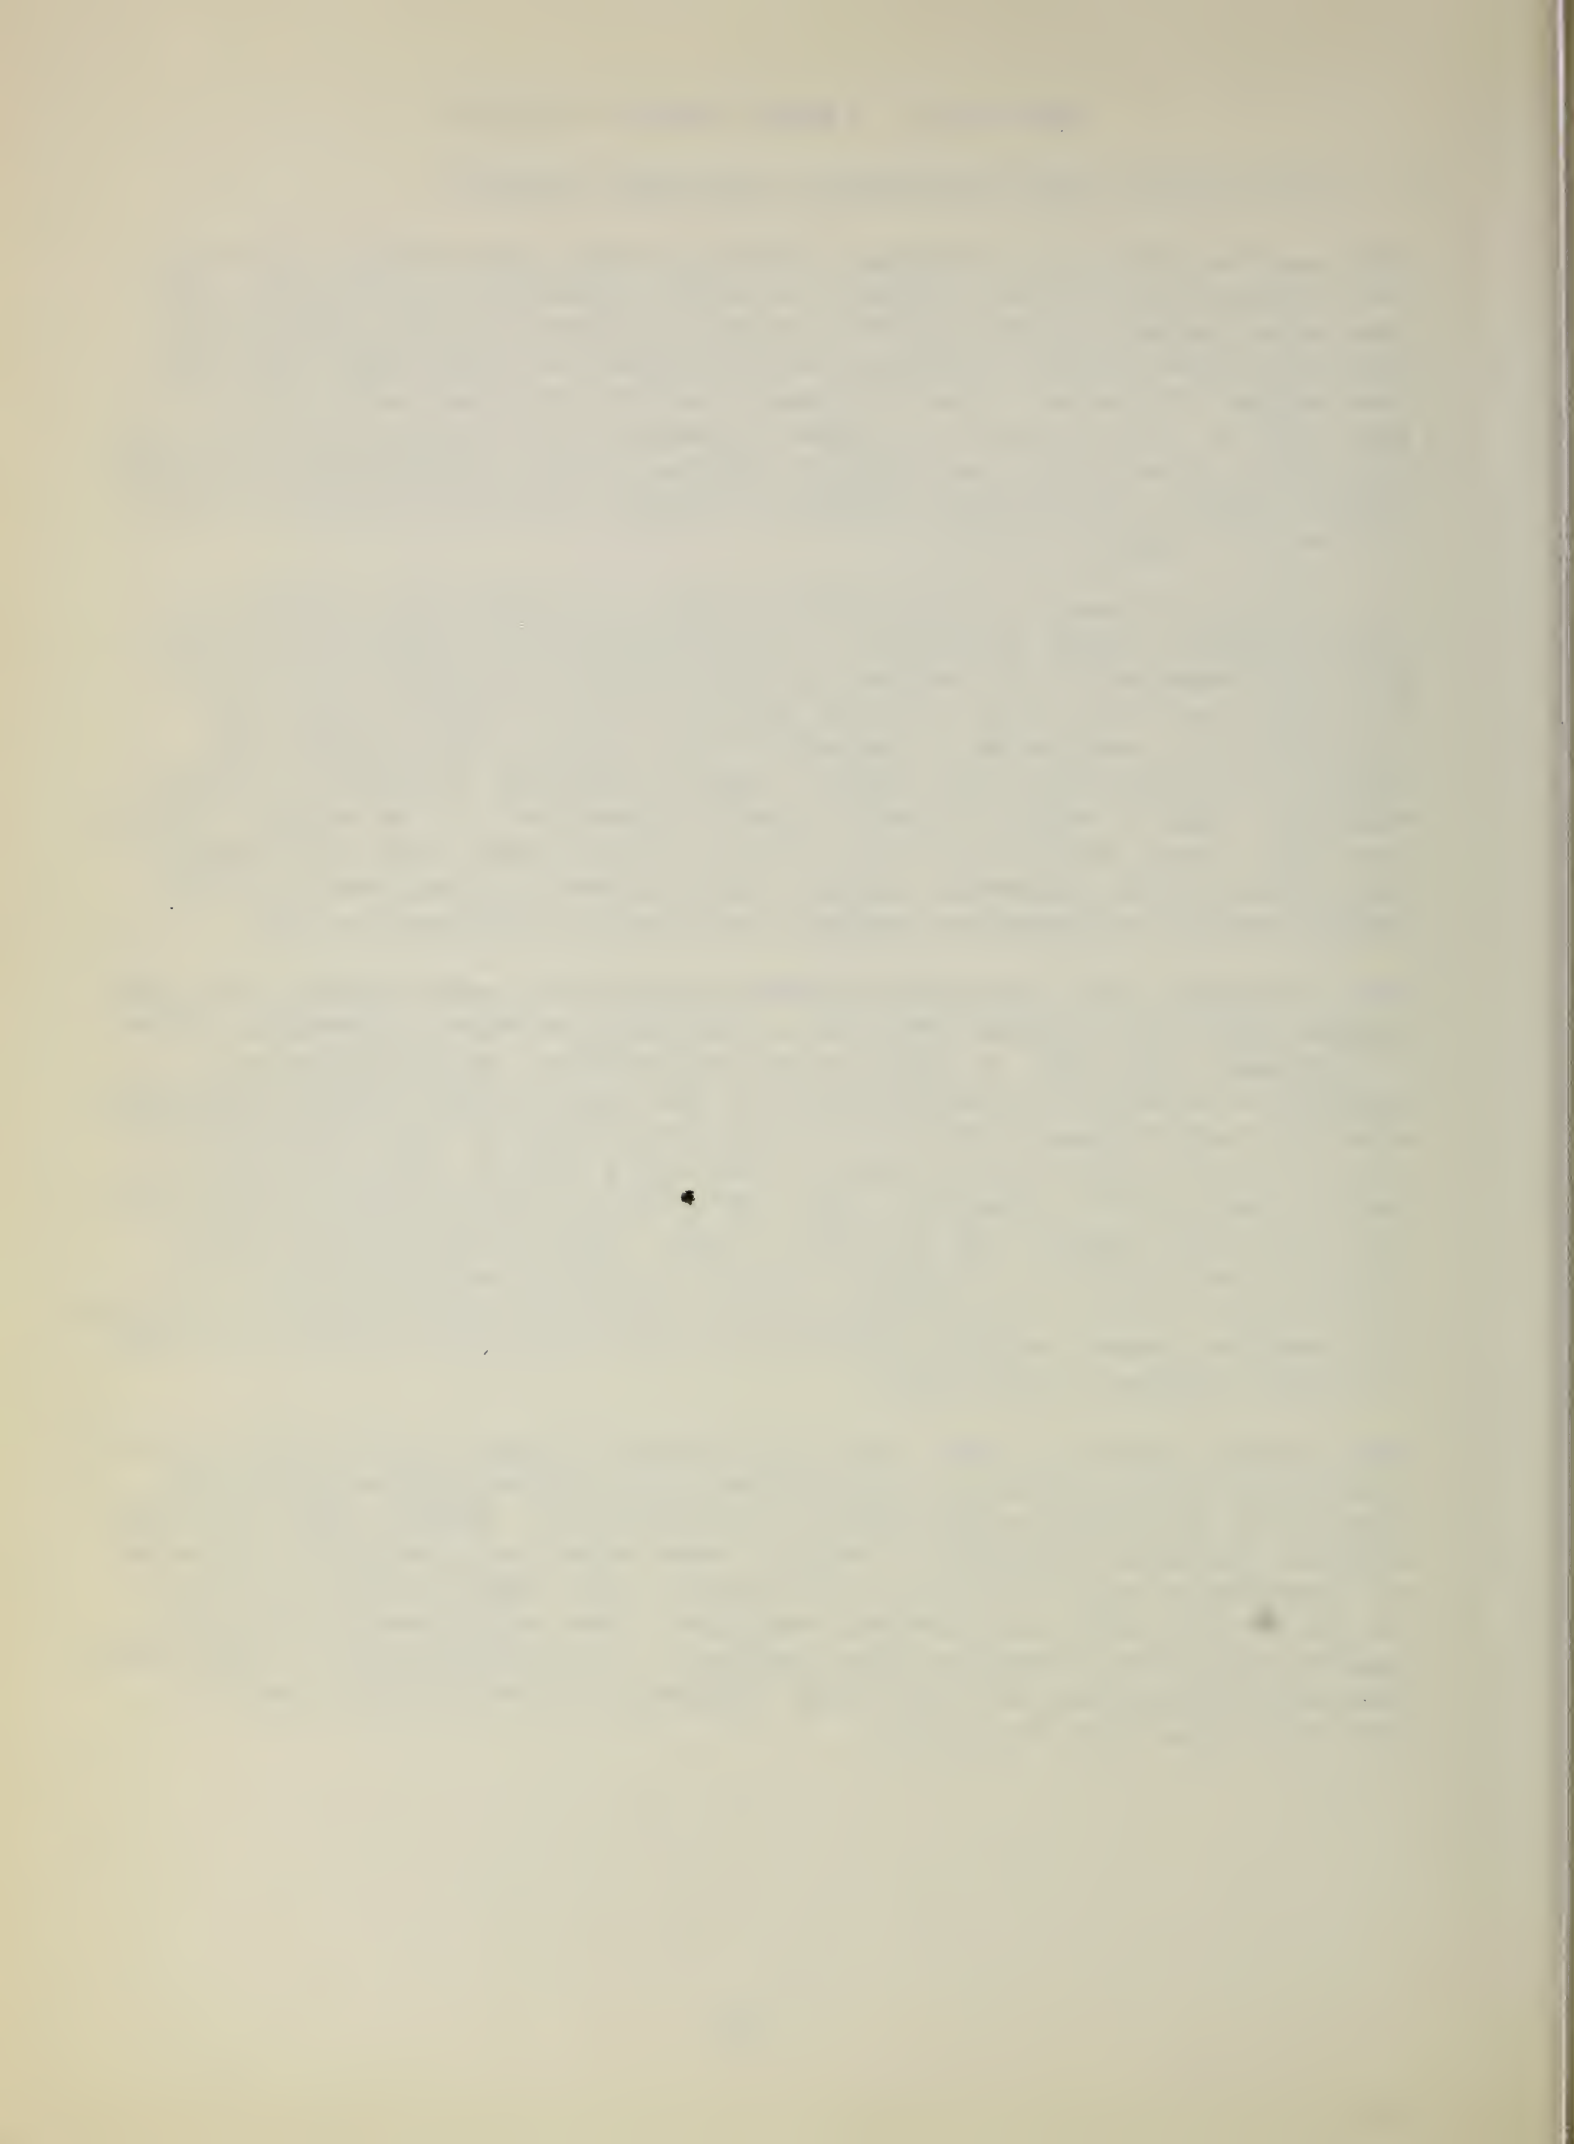

A. 1949 Commodity Loan and Purchase Agreement Programs

1949 was the first year Virginia farmers utilized the various commodity loan programs to any great extent, no doubt occasioned by the much lower-than-usual market prices received during the year for farm commodities. Under the price support programs the Department of Agriculture announced that support for wheat, corn, soybeans, barley, rye, and oats would be supported by either loan or purchase agreement. In Virginia this resulted in a total of well over one million bushels of grain under loan and 390,000 bushels (mostly corn) under agreement (whereby CCC would purchase on maturity date at support rates).

That Virginia farmers profited both directly and indirectly because of these programs cannot be denied. It is impossible to determine just how much this amounted to of course, but conservative estimates would place the figure well in excess of three million dollars. Since loans and agreements are predicated on storage of the grains during months when supply is normally more than ample, support programs, because of storage features, tend to result in more orderly marketings. It is perhaps significant that nearly one-third of the total quantity under loan was redeemed and resold on the commercial market before maturity dates, and no grain under purchase agreement was actually offered for purchase to CCC.

Under commodity loan programs producers of grain who were eligible for price support might place their grain in a commercial warehouse operating under an agreement with CCC, or might store on the farm. On the basis of negotiable warehouse receipts issued by the warehouseman, County Committees executed loan documents which were disbursed either by local lending agencies or by CCC sight draft issued by the State Office. The producers retain the right of redemption until maturity date of the note, after which time the grain becomes the property of CCC. Farm Storage loans require suitable facilities for storage of grain, something apparently not too many Virginia farms are equipped to do. In addition to the initial sampling to determine grade, monthly inspections of the grain and storage were made to insure keeping of the grain.

Much of the success of 1949 loan and purchase programs in this State can be attributed to the excellent cooperation of the Federal-State Inspection Service of the Virginia Department of Agriculture. Through their untiring efforts countless thousands of samples were taken and graded for purposes of determining grade eligibility of grain. As a result of this grading it is conceivable that many farmers developed a new consciousness of grain-quality which has heretofore been lacking. It is hoped that, in the future, inspection facilities will be fully utilized, to the ultimate benefit of both the farmer and the public.

B. 1950 Irish Potato Program

The 1950 Irish potato crop was supported at 60 percent of parity. Support prices for Virginia for potatoes loaded on cars or trucks with all marketing services performed were \$1.55 per cwt. for lots grading U. S. No. 2 or better, 2-inch minimum diameter, and \$1.00 for U. S. No. 1, Size B. Actual prices paid were much less as very few potatoes were shipped and actual purchase prices varied from 44.5 cents per cwt. to \$1.50 per cwt. depending upon the position in which bought and the maturity of the potatoes.

Very few dealers participated in the program and most purchases were made on producers' farms on a grade composition basis for on-farm disposition.

Although purchases were considerably heavier than in 1949, total cost of the program was less. A total of 601,323 cwt. was bought at a total cost of \$532,347.86 compared with 391,045 cwt. purchased in 1949 at a cost of \$634,200.00. Based on BAE estimates of total production in the State, 10.7 percent of the 1950 crop was purchased by the Government.

Because recipients of potatoes were required to pay freight charges, very few potatoes were shipped for livestock feed and shipments to institutions were smaller than in 1949.

Price support was available only to producers who did not exceed their acreage allotments. Overplanting was much heavier than in prior years, particularly on the Eastern Shore. Of a total of 1861 allotment farms, 447 farms exceeded their allotments while 230 farms grew potatoes in excess of 3 acres without an allotment.

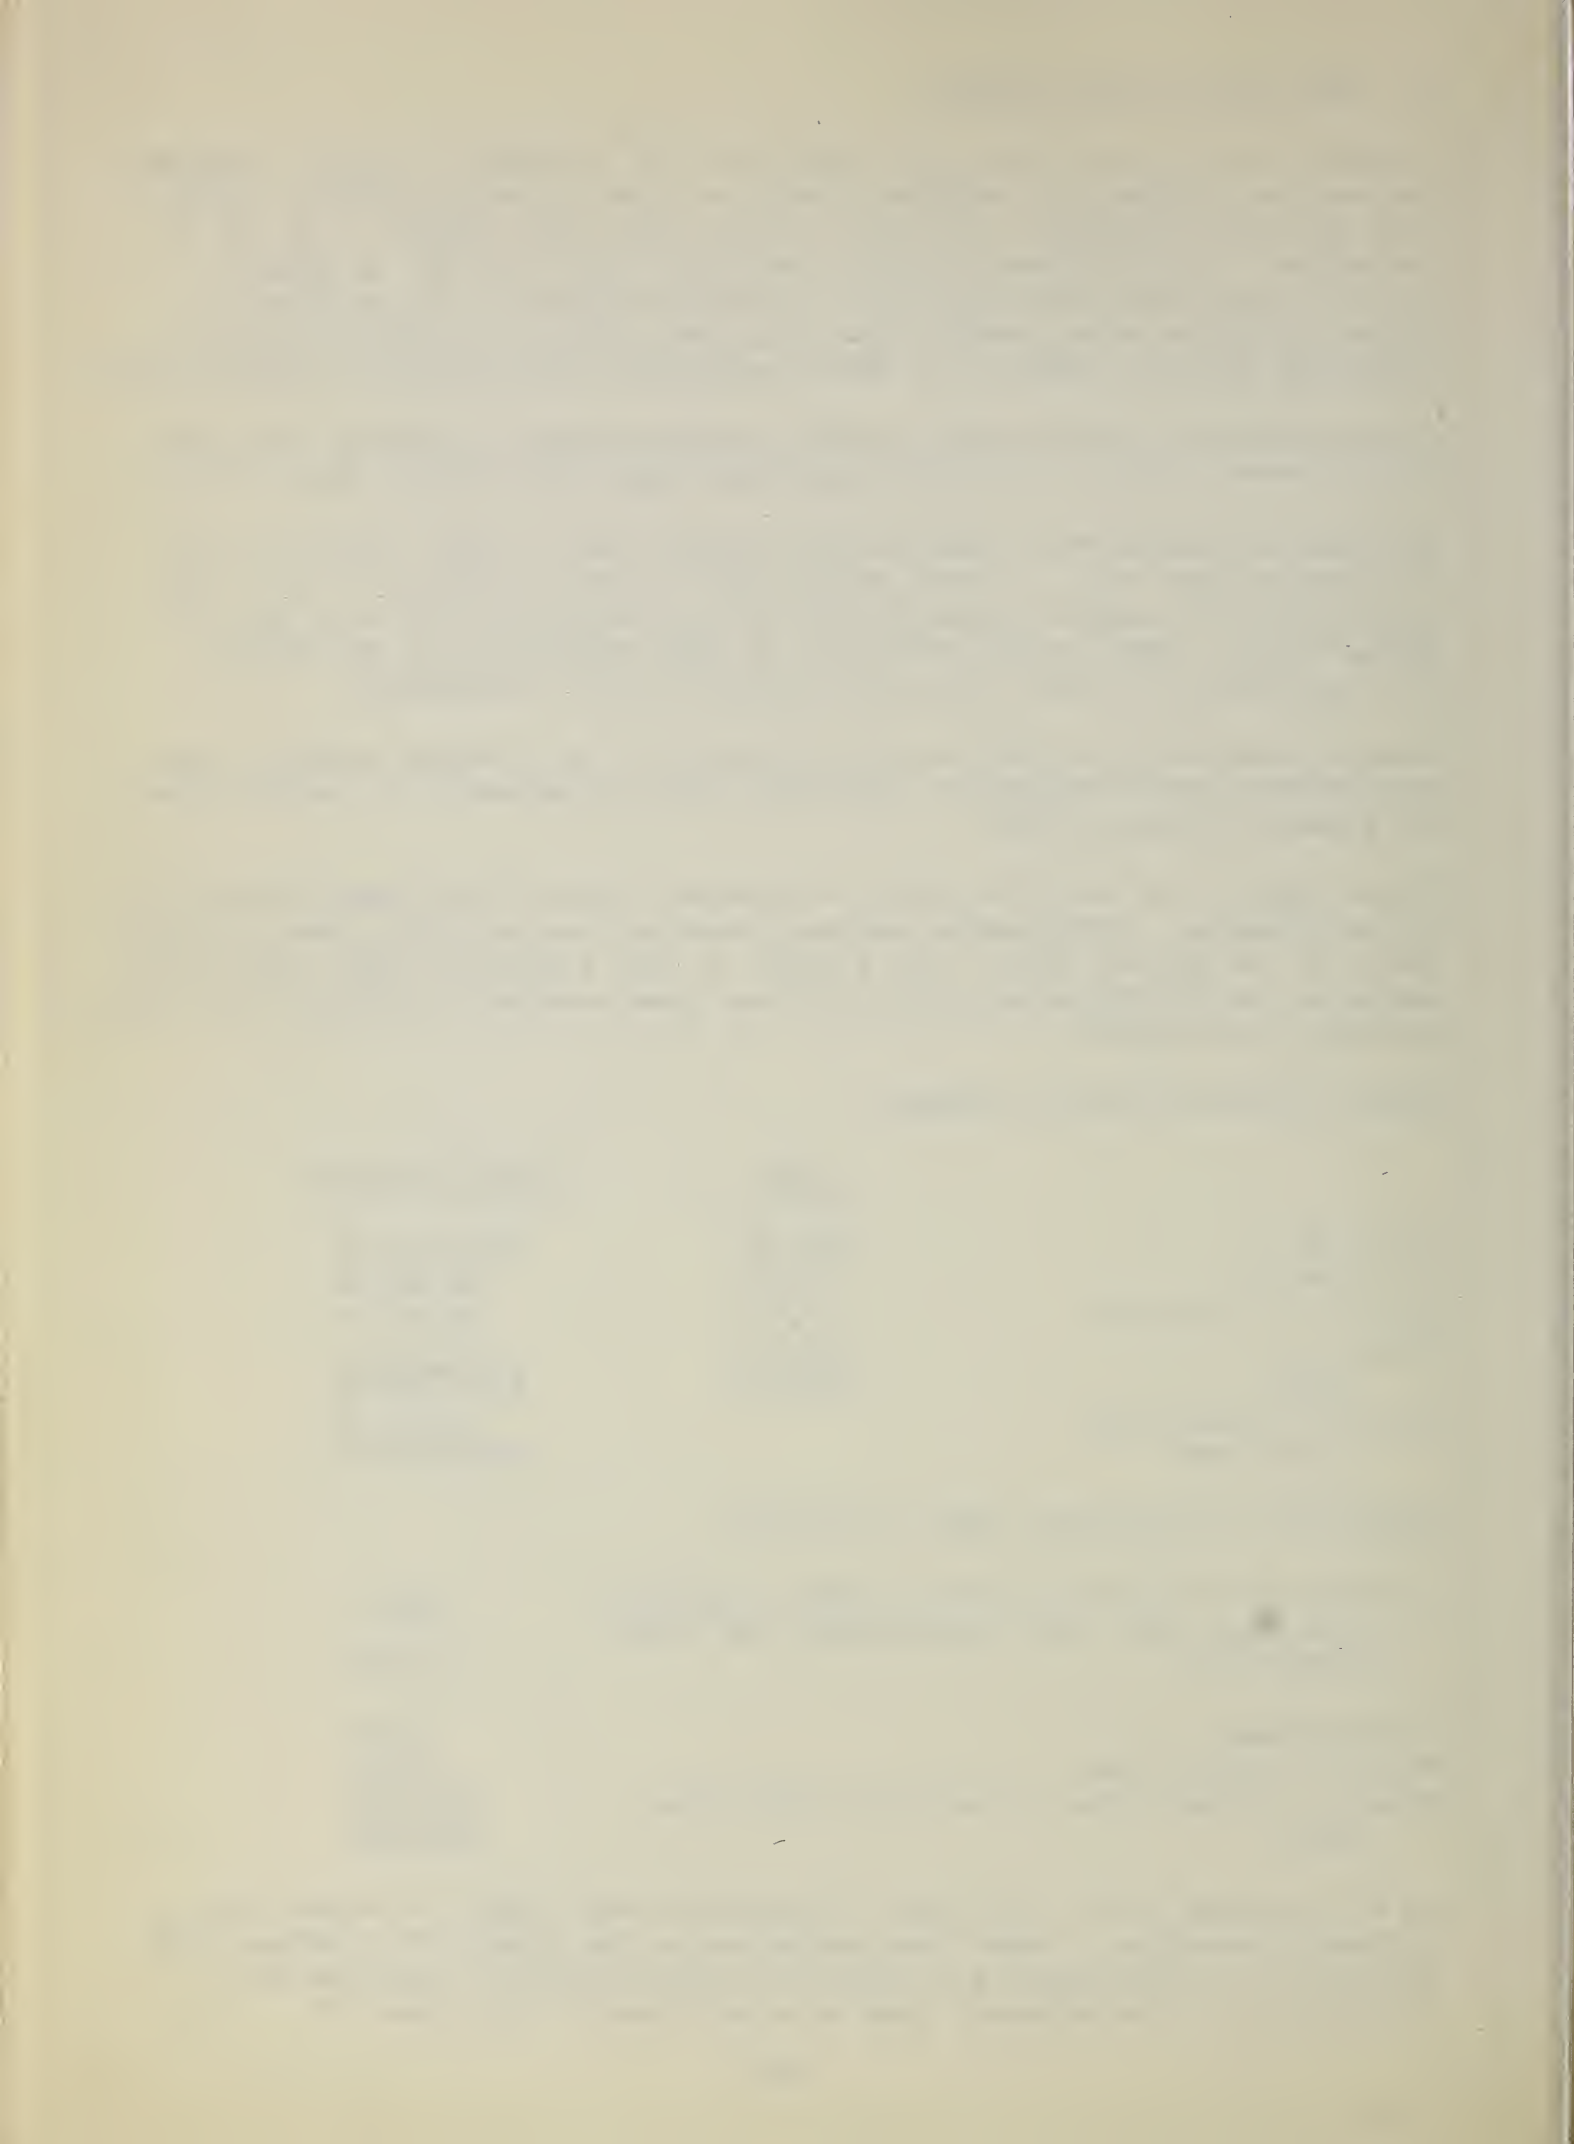

Total purchases were as follows:

	<u>Cwt.</u>	<u>Commodity Cost</u>
U. S. No. 1	309,635	\$332,784.32
U. S. No. 2	77,971	94,153.08
U. S. No. 1, Size B	177,938	99,397.25
Culls	35,779	No cost
Total	<u>601,323</u>	<u>\$526,334.65</u>
Cost of Checkloading		6,013.23
Total Cost		<u>\$532,347.88</u>

Disposition of purchases were as follows:

	<u>Cwt.</u>
To Section 416 outlets (school lunch, hospitals, orphanages, and other institutions for human consumption)	37,720
To Stockfeed	6,002
To Penal Institutions	1,200
Resale to farmers for on the farm disposition	556,401
Total	<u>601,323</u>

As will be seen above, the bulk of purchases were resold to farmers for on-farm disposition. Under the provisions of the program if potatoes were offered to the Government and approved outlets were not available for disposition of the potatoes, they were sold back to producers or

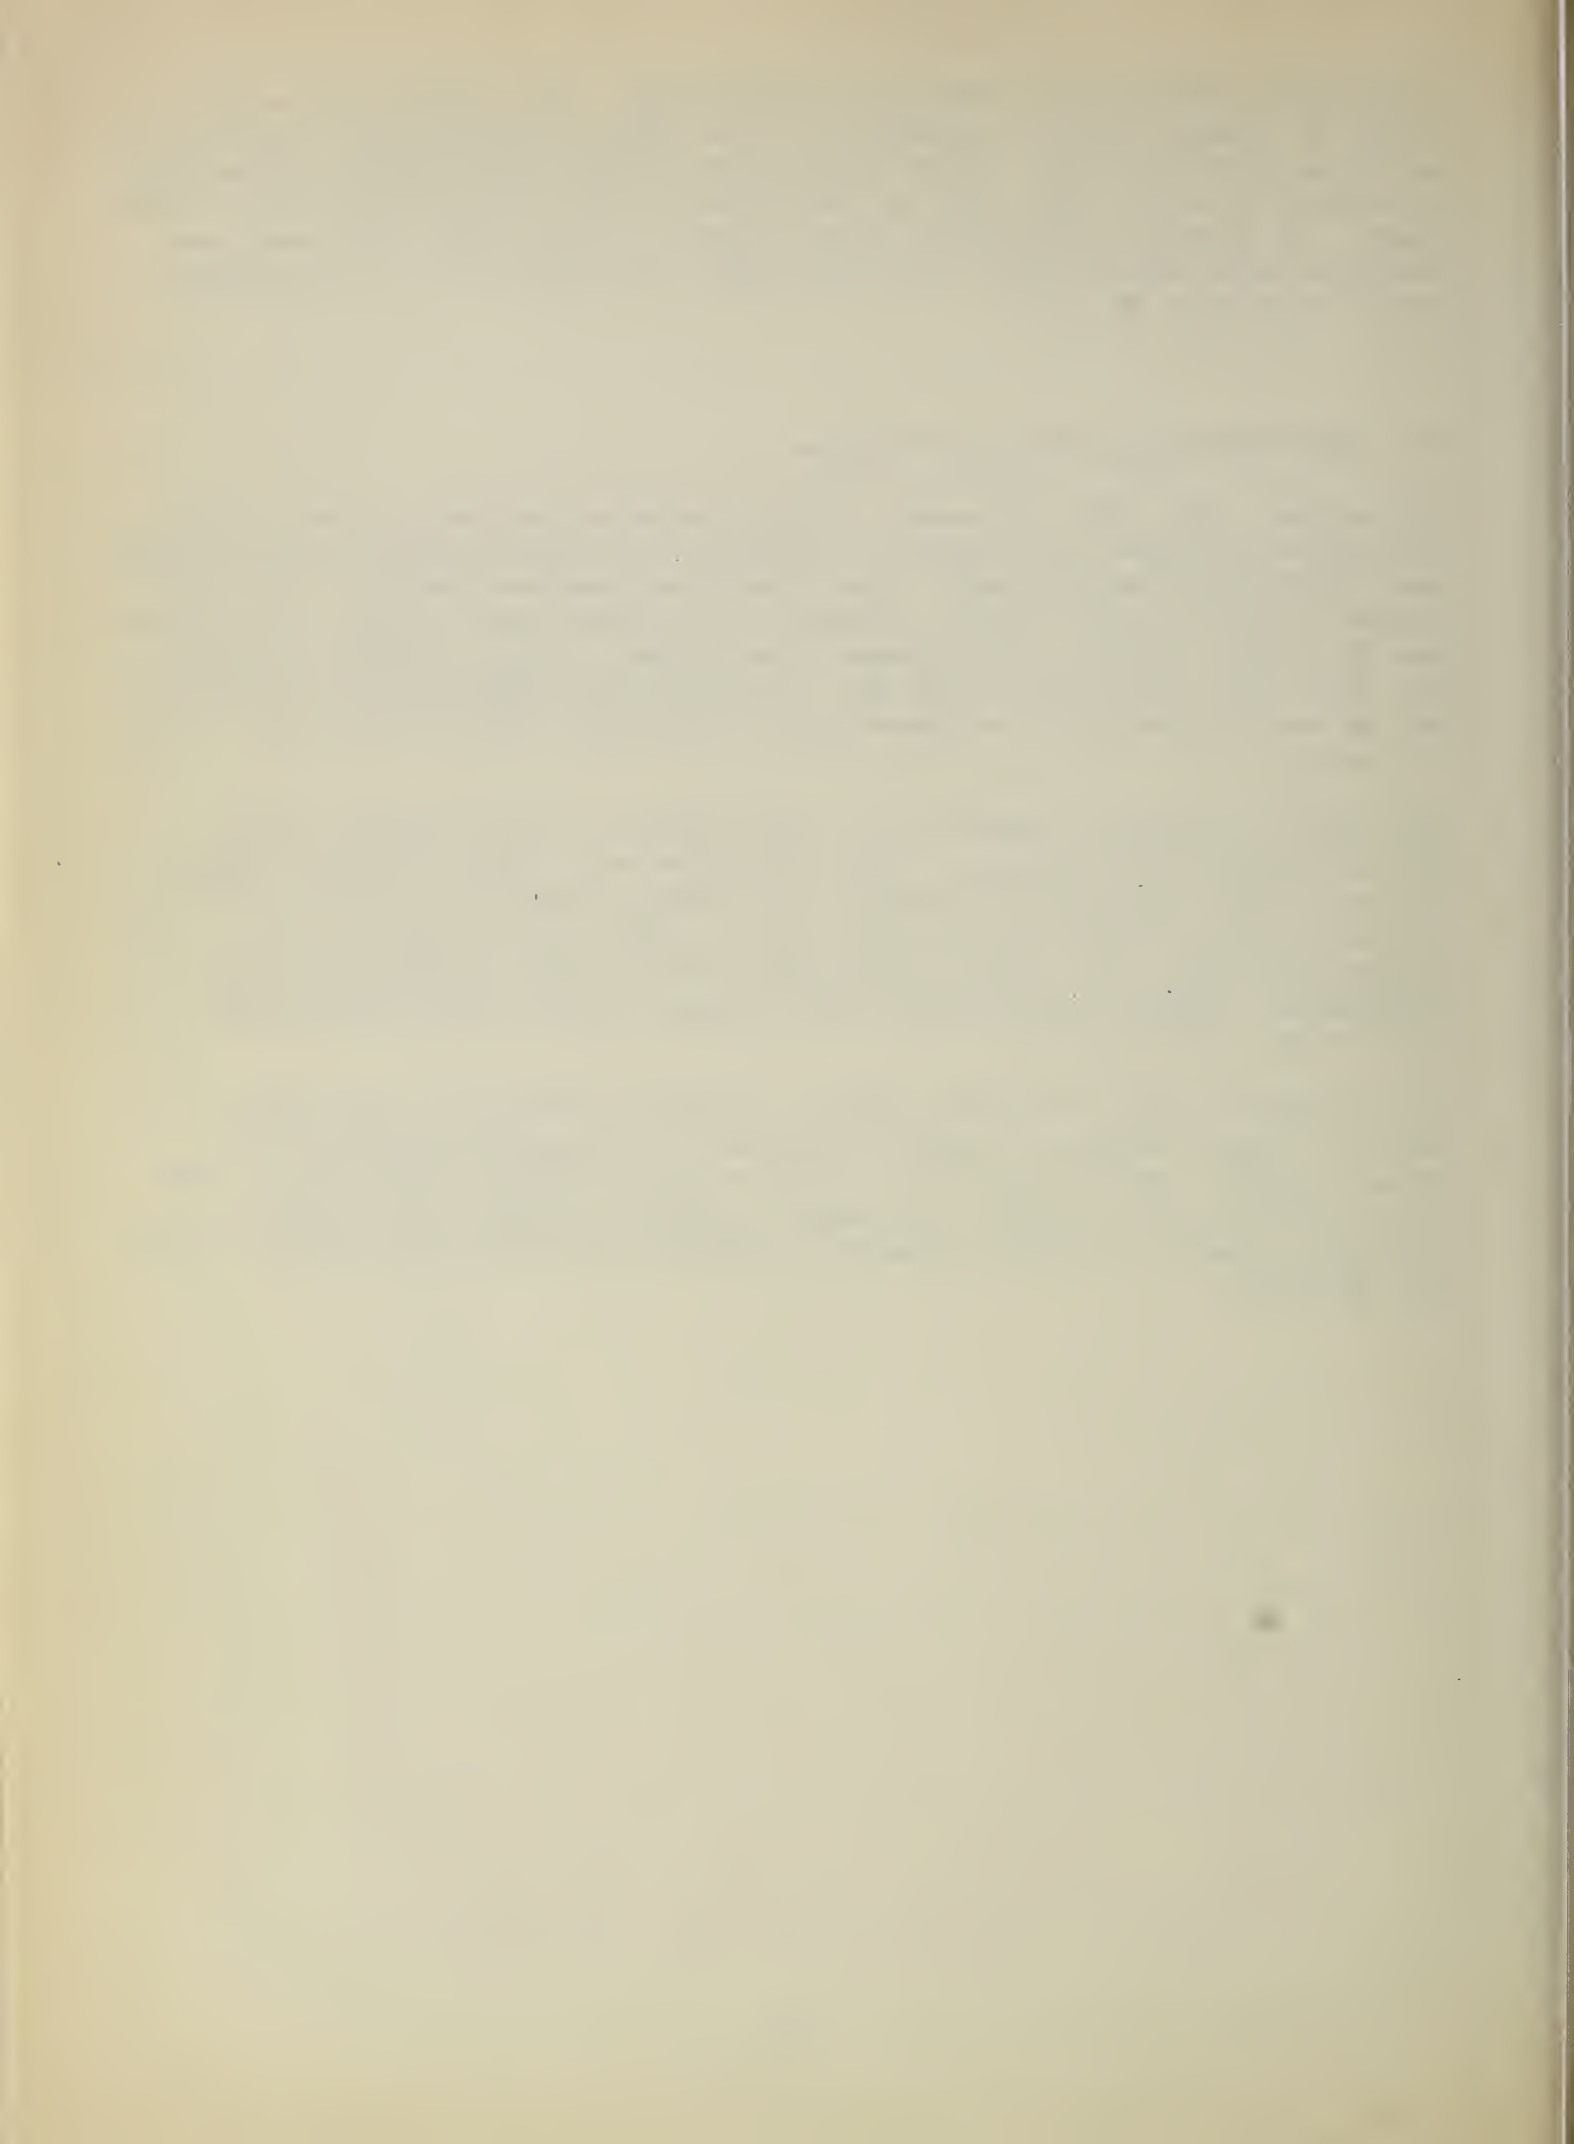

cooperating dealers at 1 cent per hundredweight. The potatoes were then taken by farmers who were permitted to use them for stock feed, fertilizer, and other non-food uses. Reports indicate a large proportion of these potatoes were used for stock feed on the farms of the producers who bought them back. All potatoes other than those going to institutions for human consumption under Section 416 were dyed under the supervision of the Federal-State Inspection Service.

C. 1949 Fresh Apple Purchase Program

In October, 1949, PMA announced a direct purchase program on fresh apples to remove surpluses for donation to Section 32 outlets (school lunch program and charitable institutions). There were two purchase periods - (a) purchases at harvest time during October and November when the price to growers was \$1.70 per bushel; (b) purchases from storage during January, February, and March when the price was \$1.80. Purchases were made only of varieties and sizes considered to be commercially acceptable and of U. S. No. 1 grade or better.

Purchases in Virginia amounted to 17,972 bushels in the harvest period, 55,246 bushels from storage. Total purchases were 73,218 bushels (about 140 cars) and amounted to \$129,995 for commodity cost. Nearly all Virginia purchases were distributed in this State. Apples were taken in all commercial areas, but the bulk came from the vicinity of Winchester and Chilhowie. General satisfaction with program results was expressed by growers and their agents.

In addition to PMA purchases, growers received substantial assistance under an export subsidy program, designed to encourage exportation of fresh apples. Subsidy payments of 50 per cent of export sales price, not to exceed \$1.25 per bushel, were made on 149,819 bushels exported by Virginia growers. Average payment in Virginia was \$1.10 per bushel, totaling \$165,112.

D.

SECTION IV - TOBACCO CROP INSURANCE PROGRAM IN VIRGINIA

The Tobacco Crop Insurance Program is entering its seventh year of operation in Virginia. In 1945 Tobacco Insurance was offered in two counties with three additional counties added in 1948 and two each for the crop years 1949, 1950 and 1951. Continued gradual expansion is anticipated and eventually this insurance should be available in all of the major tobacco counties.

Table I
Number of policy holders by counties 1945 - 1950

	<u>1945</u>	<u>1946</u>	<u>1947</u>	<u>1948</u>	<u>1949</u>	<u>1950</u>
Appomattox	-	-	-	424	323	366
Dinwiddie	-	-	-	-	-	690
Halifax	-	-	-	1712	1143	2273
Lunenburg	298	287	503	603	569	688
Mecklenburg	-	-	-	-	-	1777
Pittsylvania	539	739	1399	2487	2080	2630
Washington	-	-	-	1277	856	1007
Totals by years	837	926	1902	6503	4971	9431

Table II
Percent of Eligible Tobacco Growers carrying Insurance in 1950

Appomattox	-	62%
Dinwiddie	-	94%
Halifax	-	74%
Lunenburg	-	88%
Mecklenburg	-	74%
Pittsylvania	-	58%
Washington	-	36%

Table III
Reserve requirements to be met before premium reductions are permissible and reserves built up through 1949.

	(Col. 1) Required reserve on basis of present number of contracts	(Col. 2) Reserve balance built up through crop year 1949
Appomattox	\$ 10,354.00	\$ 5,561.84
Halifax	112,835.00	40,327.41
Lunenburg	42,026.00	36,417.49
Pittsylvania	136,071.00	77,175.08
Washington	26,077.00	9,048.13
